Artefact Shuttlecock:

Material used:

- Paper (120 & 140 GSM)
- Scale
- Pencil
- Cutter
- Fevicol

Technique:

- We drew out stencils(to scale) of all the individual parts that would go into making a shuttlecock, ie. Feathers, dome shaped structure(cork), thread, etc.
- Then we cut out each part individually and stick them together with fevicol and assemble the shuttlecock.

Artefact Salt & Pepper Shaker:

Material Used:

- Wire
- Paper
- Cutter
- Pliers
- Scale
- Square pipe
- Fevicol

Technique:

- First, we wound the wire around the square pipe and twisted the structure after removing it from around the square pipe.
- After securing the ends of the wire with a fine (S.S) fishing wire, we made the base and the top of the salt and pepper shakers.
- After completing the wire structure, we made a container out of paper (black-pepper, white-salt) to actually contain salt and pepper.
